- ISO 140001:2004 ENVIRONMENTAL MANAGEMENT SYSTEM
- DOMESTIC MANUFACTURER CERTIFICATE
- CAPACITY REPORT
- FACILITY CLEARANCE CERTIFICATE
- NATO CLEARANCE CERTIFICATE

Purpose of the System

It is aimed to benefit from all the facilities on campus with a single card. The system works within the concept of centralization. The control of the transit security, expenditure, and top-up points within the campus is completely provided through the system. Installation can be provided via closed-loop or bank integration.

System Modules

CARD PRINTING AND PERSONALIZATION

MEMBERSHIP TRACKING

PARKING SYSTEM

VISITOR TRACKING

SERVICE TRACKING

RFID LIBRARY TRACKING

BIKE / E-SCOOTER PARKING STATIONS

REFECTORY

PHYSICAL SAFETY PRODUCTS

STUDENT AFFAIRS KIOSK

BANK INTEGRATION

MOBILE PHONE INTEGRATION

TRANSPORTATION

ACCESS CONTROL

DORMITORY TRACKING

DOOR CONTROL

MOBILE APP

Access Control System

“Access Control System” is now an inevitable requirement in larger buildings and businesses and campuses with crowded staff.

Business safety is also taken under control as well as persons who enter and exit are monitored and controlled through this system.

Only authorized persons can enter and exit the area where the system is installed.

The card and biometric devices can be used in the system. It is possible to integrate the system with a physical barrier (turnstile, barrier, elevator, sliding door, magnetic lock, etc.).

Refectory Control System

The purpose of the system is to present the staff's number and summary of eating in total, in days, in person, or in the unit.

This system is very convenient, especially in the firms which have subcontracted-refectory operated in order to reach the number of meals accurately and rapidly.

Different pricing can be made through additional modules of the system depending on the statute (student, academic member, guest, trainee, etc.) and the number of eating.

Dormitory Access Control and Automation System

It allows students to enter and exit the dormitory safely. In the system, only students who are authorized according to time intervals can enter the dormitory. All students can be allowed to enter the dormitories having common use areas. It gives an audible warning in the case the dormitory door remains open for a long time.

It can be ensured that the dormitory door remains open at certain times on demand. The logs of these adjustments made via software can also be kept.

The late-coming, absent, and entrance reports can be received thanks to reporting feature of the software.

In the system in question, it is possible to manage the dormitories in different locations from one point. The card and biometric devices can be used in the system.

Card Printing and Personalization System

Card Printing and Personalization System is used to meet institutions and firms' printed card needs.

The color or black printing can be made on single/double sides of white or ground-printed cards in ISO 7810 (54 mm x 86 mm) size simultaneously through Card Printer.

The magnetic tape, contact, and contactless card encoder module can optionally be mounted on the card printers.

Staff and Student Automation Integrations

With personnel and student affairs integrations, the system works end-to-end completely automatically. There is no need for manual action, thus increasing efficiency and reducing error rates and costs.

Top-Up

In the system, credit/money can be top-up onto the card from cash desks, kiosks, Mobile wallets with GSM Integration, virtual POS, and ATMs.

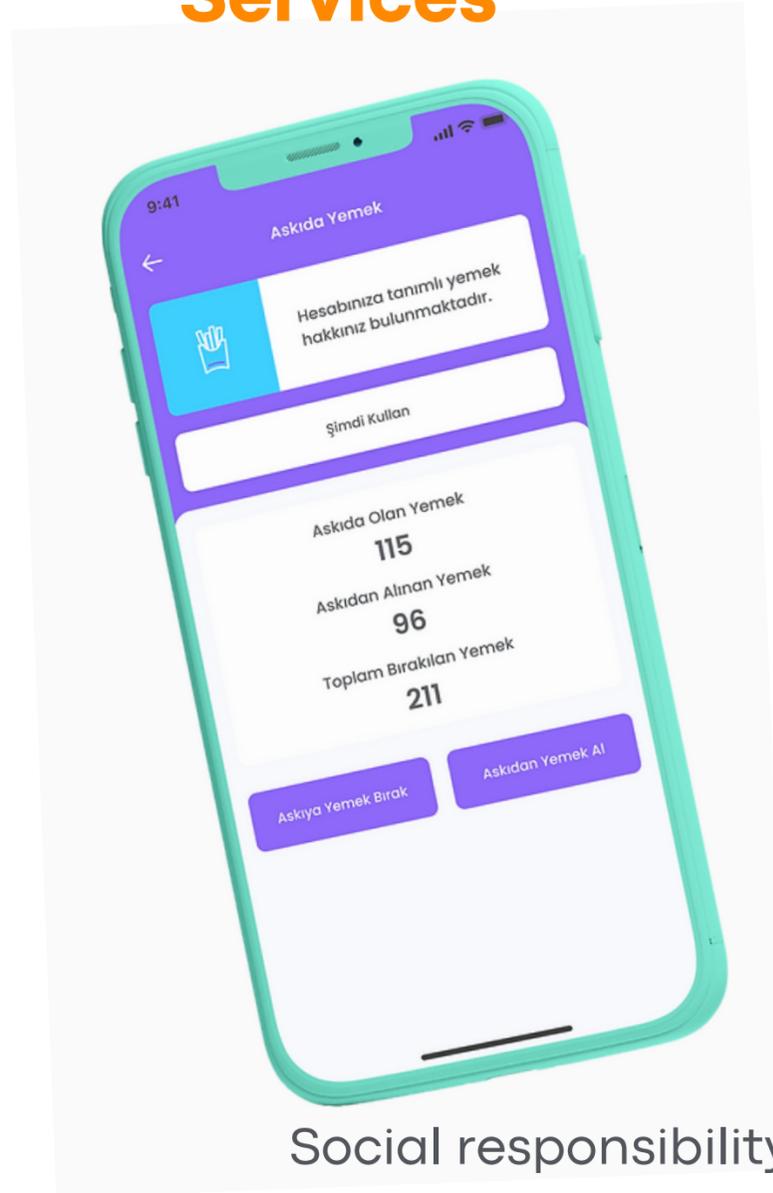

What is SoliClub?

With the promise of #MobileFreedom, SoliClub is a new generation campus card system where payment infrastructures and access control systems on university campuses can all be managed via smartphones.

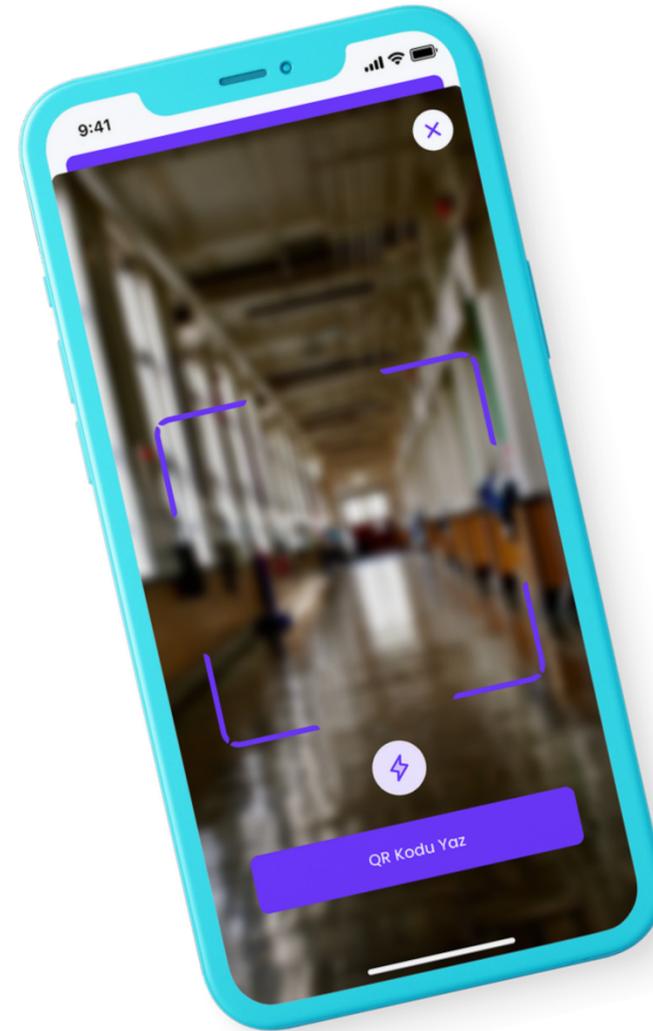

Fast Transition

Additional Services

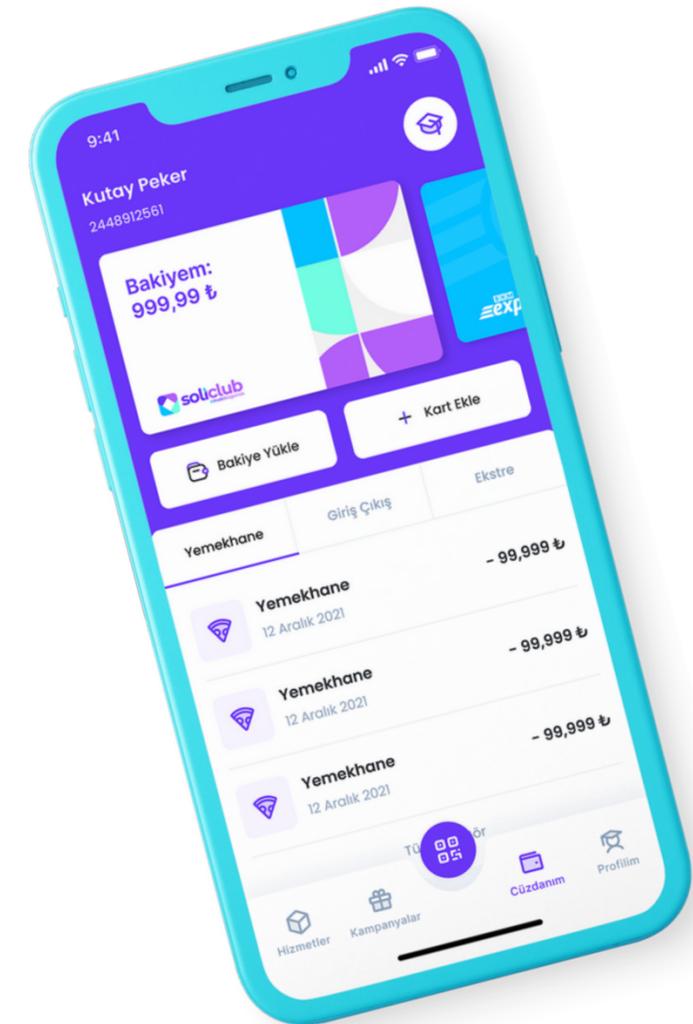

Social responsibility, campaigns, quick announcement, attendance tracking

Fast transition from turnstiles to smartphones with QR codes or NFC.

One Click Payment

7/24 Top-up by one click
